Computer Architecture

Single and Multivariable Calculus

Intro to Programing (with Honors)

Discrete Structures

Statistics and Probability

Lectures in Engineering

Entrepreneurship

PROJECTS

SCHEDULE OPTIMIZATION

Designed and built a web application that allows college students to make the best schedule possible using an optimization algorithm.

Used HTML, CSS, JS and Twitter Bootstrap to design the interface for the application.

C++ PROJECTS

Used OOP, File Handling and Data Structures to develop multiple C++ Projects like a Library Management System, Movie Reservation System, Hangman (Based on the popular Word Game).

IRIS

Using the Twilio and some other APIs to build a tool that allows users who don't own a smartphone or live in areas with zero or limited internet connectivity to be able to perform operations like Google Search, check the weather etc using a simple message.

APARTMENTFINDER.COM

Building a web application that allows users (mainly college students) to easily look for apartments and post a listing using HTML, CSS, JavaScript and MySQL.

Engineering the product from the ground up.
